What Client's Say

“ Passed yesterday. Very good valid 300-101 dumps. Only 3-4 questions are new. Most questions and answers are valid. But be careful several answers are incorrect. Study hard. ”

 **Wilbur**
★★★★★

“ I got 90%. This dumps contains redunant questions and few errors, but defintily enough to pass. :)Prepare well and study much more.Still valid. ”

 **Beatrice**
★★★★★

Exam : 70-505-Csharp

Title : TS: Microsoft .NET Framework 3.5,
Windows Forms Application
Development: 70-505Csharp Exam

Vendors : Microsoft

Version : DEMO

NO.1 You are creating a Windows Forms application by using the .NET Framework 3.5. You create a new form in your application. You add 100 controls at run time in the Load event handler of the form. Users report that the form takes a long time to get displayed. You need to improve the performance of the form.

What should you do?

- A. Call the InitLayout method of the form before adding all the controls.Call the PerformLayout method of the form after adding all the controls.
- B. Call the InitLayout method of the form before adding all the controls.Call the ResumeLayout method of the form after adding all the controls.
- C. Call the SuspendLayout method of the form before adding all the controls.Call the PerformLayout method of the form after adding all the controls.
- D. Call the SuspendLayout method of the form before adding all the controls.Call the ResumeLayout method of the form after adding all the controls.

Answer: D

NO.2 You are creating a Windows Forms application by using the .NET Framework 3.5. You create a new form in your application. You add a PrintDocument control named pntDoc to the form. To support the print functionality, you write the following code segment in the application. (Line numbers are included for reference only.)

```
01 pntDoc.BeginPrint +=  
new PrintEventHandler(PrintDoc_BeginPrint);02 ...03 bool canPrint =  
CheckPrintAccessControl();04 if
```

(!canPrint) {05 06 }07 You need to ensure that the following requirements are met: When the user has

no print access, font and file stream initializations are not executed and the print operation is cancelled.Print operations are logged whether or not the user has print access. What should you do.?

- A. Add the following code segment at line 05. pntDoc.BeginPrint -= new PrintEventHandler(PrintDoc_BeginPrint);pntDoc.BeginPrint += new PrintEventHandler((obj, args) => args.Cancel = true); Add the following code segment at line 07. pntDoc.BeginPrint += new

```
PrintEventHandler((obj1, args1) => LogPrintOperation());
```

B. Add the following code segment at line 05. pntDoc.BeginPrint += new

```
PrintEventHandler(delegate(object obj, PrintEventArgs args){});
```

 Add the following code segment at line

```
07. pntDoc.BeginPrint -= new PrintEventHandler(PrintDoc_BeginPrint);pntDoc.BeginPrint += new
```

```
PrintEventHandler((obj1, args1) => LogPrintOperation());
```

C. Add the following code segment at line 05. pntDoc.BeginPrint -= new

```
PrintEventHandler(PrintDoc_BeginPrint);pntDoc.BeginPrint -= new
```

```
PrintEventHandler(delegate(object
```

```
obj, PrintEventArgs args){});
```

 Add the following code segment at line 07. pntDoc.BeginPrint -= new

```
PrintEventHandler((obj1, args1) => LogPrintOperation());
```

D. Add the following code segment at line 05. pntDoc.BeginPrint -= new

```
PrintEventHandler((obj, args)
```

```
=> args.Cancel = true);
```

 Add the following code segment at line 07. pntDoc.BeginPrint += new

```
PrintEventHandler(PrintDoc_BeginPrint);pntDoc.BeginPrint -= new PrintEventHandler((obj1, args1) =>
```

```
LogPrintOperation());
```

Answer: A

NO.3 You are creating a Windows Forms application by using the .NET Framework 3.5. The application

requires a form to display a clock. You need to create a circular form to display the clock.

Which code

segment should you use?

A. this.FormBorderStyle =

```
System.Windows.Forms.FormBorderStyle.None;System.Drawing.Drawing2D.GraphicsPath path = new
```

```
System.Drawing.Drawing2D.GraphicsPath();path.AddEllipse(0, 0, this.Width, this.Height);Region reg =
```

```
new Region();this.Region = reg;
```

B. this.FormBorderStyle =

```
System.Windows.Forms.FormBorderStyle.FixedSingle;System.Drawing.Drawing2D.Graphics Path path =
```

```
new System.Drawing.Drawing2D.GraphicsPath();path.AddEllipse(0, 0, this.Width, this.Height);Region reg
```

```
= new Region(path);this.Region = reg;
```

C. `this.FormBorderStyle = System.Windows.Forms.FormBorderStyle.None; System.Drawing.Drawing2D.GraphicsPath path = new System.Drawing.Drawing2D.GraphicsPath(); path.AddEllipse(0, 0, this.Width, this.Height); Region reg = new Region(path); this.Region = reg;`

D. `this.FormBorderStyle = System.Windows.Forms.FormBorderStyle.FixedSingle; System.Drawing.Drawing2D.GraphicsPath path = new System.Drawing.Drawing2D.GraphicsPath(); path.AddEllipse(0, 0, this.Width, this.Height); Region reg = new Region(); this.Region = reg;`

Answer: C

NO.4 You are creating a Windows Forms application by using the .NET Framework 3.5. You create a new form in the application. You add a ContextMenuStrip control named `ctxMenu` to the form. You have a user-defined class named `CustomControl`. You write the following code segment in the application. (Line numbers are included for reference only.)

```
01 CustomControl myControl = new CustomControl();
```

02 You need to ensure that an instance of `CustomControl` is displayed on the form as a top-level item of the `ctxMenu` control. Which code segment should you add at line 02?

A. `ToolStripControlHost host = new ToolStripControlHost(myControl); ctxMenu.Items.Add(host);`

B. `ToolStripPanel panel = new ToolStripPanel(); panel.Controls.Add(myControl); ctxMenu.Controls.Add(panel);`

C. `ToolStripContentPanel panel = new ToolStripContentPanel(); panel.Controls.Add(myControl); ctxMenu.Controls.Add(panel);`

D. `ToolStripMenuItem menuItem = new ToolStripMenuItem(); ToolStripControlHost host = new ToolStripControlHost(myControl); menuItem.DropDownItems.Add(host); ctxMenu.Items.Add(menuItem);`

Answer: A

NO.5 You are creating a Windows Forms application by using the .NET Framework 3.5. You

create a new

form named ConfigurationForm in the application. You add the following controls to the form.

A

TabControl control named tbcConfigurationInformation along with two TabPage controls named

tabGeneralInfo and tabAdvancedSettingsA button control named btnShowAdvSettings You add the

following code segment in the form. (Line numbers are included for reference only.) 01

```
private void
```

```
ConfigurationForm_Load(object sender, EventArgs e)02 {03
```

```
this.btnShowAdvSettings.Click +=
```

```
new 04 EventHandler(btnShowAdvSettings_Click);05 06 }07 08 private void
```

```
btnShowAdvSettings_Click(object sender, EventArgs e)09 {10 11 }
```

You are defining the initial configuration and behavior of ConfigurationForm. You need to ensure that the following requirements are

met: The tabAdvancedSettings TabPage control is initially hidden when the Form is loaded.The

tabAdvancedSettings TabPage control is displayed when the btnShowAdvSettings button control is

clicked. What should you do?

A. Insert the following code segment at line 05. `this.tabAdvancedSettings.Hide();` Insert the following code

segment at line 10. `this.tabAdvancedSettings.Show();`

B. Insert the following code segment at line 05.

`tbcConfigurationInformation.TabPages.Remove(tabAdvancedSettings);` Insert the following code

segment at line 10. `tbcConfigurationInformation.TabPages.Add(tabAdvancedSettings);`

C. Insert the following code segment at line 05.

`tbcConfigurationInformation.SelectTab(tabAdvancedSettings);tbcConfigurationInformation.Se`
`tVisibleCor`

`e(false);` Insert the following code segment at line 10.

`tbcConfigurationInformation.SelectTab(tabAdvancedSettings);tbcConfigurationInformation.Se`
`tVisibleCor`

`e(true);`

D. Insert the following code segment at line 05. `this.tabAdvancedSettings.Invalidate(false);`

Insert the

following code segment at line 10. `this.tabAdvancedSettings.Invalidate(true);`

Answer: B
